

# Samples of common T<sub>E</sub>X font encodings

Scott Pakin  
*scott+pkfh@pakin.org*

August 8, 2009

The `pkfix-helper` program occasionally needs help from the user in selecting an appropriate TFM file to match a Type 3 font found in a PostScript document. This document assists with the task of identifying fonts by presenting character-by-character comparisons of all 256 character positions in a selection of common T<sub>E</sub>X fonts. The following encodings are represented:

- T<sub>E</sub>X text (e.g., *cmr10*)
- T<sub>E</sub>X math italic (e.g., *cmmi10*)
- T<sub>E</sub>X math symbols (e.g., *cmsy10*, *msam10*, and *msbm10*—each of which provides different symbols)
- L<sup>A</sup>T<sub>E</sub>X symbols (e.g., *lasy10*)
- T<sub>E</sub>X math extension (e.g., *cmex10*)
- T<sub>E</sub>X base 1 encoding (e.g., *ptmr8r*)
- Adobe standard encoding (e.g., *rptmr*)
- Adobe symbol encoding (e.g., *rpsyr*)
- T<sub>E</sub>X extended ASCII (e.g., *cmtex10*)
- extended T<sub>E</sub>X font encoding (e.g., *ecrm1000*)
- T<sub>E</sub>X text companion symbols (e.g., *tcrm1000*)
- T<sub>E</sub>X text subset (e.g., *eufm10*, which provides fraktur letters for mathematical typesetting)
- unspecified (e.g., *stmary10*; *wasy10* is also included here although it erroneously claims to be T<sub>E</sub>X text)

The following encodings are not shown in this document because the glyphs they provide exhibit little variety and are therefore relatively easy to identify:

- L<sup>A</sup>T<sub>E</sub>X line (e.g., *line10*)—line segments and arrowheads in different lengths and orientations
- L<sup>A</sup>T<sub>E</sub>X circle (e.g., *lcircle10*)—circles and 90° arcs in different sizes

- X<sub>Y</sub> line segments (e.g., *xyline10*)—line segments in different orientations
- X<sub>Y</sub> miscellaneous (e.g., *xymisc*)—90° arcs in different sizes
- X<sub>Y</sub> quarter circles (e.g., *xyqc10*)—small 90° arcs in different orientations
- X<sub>Y</sub>-pic 1/8 circles (e.g., *xycirc10*)—45° arcs in different sizes
- X<sub>Y</sub>-pic directional (e.g., *xyatip10*, *xybsql10*, *xybtip10*, and many others)—small-degree arcs in different orientations
- X<sub>Y</sub>-pic semidirectional (e.g., *xydash10*)—short line segments in different orientations

To use the tables that appear below, first produce “before” and “after” font sheets using `pkfix-helper`’s `--ps` and `--tex` options. (See the `pkfix-helper` documentation for details.) For each font in which the “after” characters are completely different from the “before” characters—as opposed to merely the wrong selection of font size, weight, or slant—make a note of the font that `pkfix-helper` announced it had selected. Find the table and column in which the “before” symbol exists and the “after” symbol is associated with the font selected by `pkfix-helper`. The font associated with the “before” symbol is what should be specified in a `--force` option to `pkfix-helper`. For example, consider the observations shown in Figure 1. We find that the “after” character, “ $\eta$ ”, is associated with *cmmi10* (the same typeface used for *cmmib10* but in book weight) at character position 17. The “before” character, “ $\equiv$ ”, is also present in position 17 and is associated with *cmsy10*. Therefore, we know we need to re-run `pkfix-helper` with the `--force="Fj=cmsy10 @ 1.2X"` option to force it to associate document font *Fj* with *cmsy10* instead of *cmmib10*.

The font size may need adjusting. In the preceding example, `--force="Fj=cmsy9"` produces less mismatch for *cmmib10 @ 1.2X* than does `--force="Fj=cmsy10 @ 1.2X"` (`mismatch=0.00106` vs. `mismatch=4.43701`).

Making such a determination still requires human involvement. A suggested approach is to observe that `--force="Fj=cmsy10 @ *"` causes `pkfix-helper` to select a scaling factor of  $0.92918X$  for a scaled font size of  $0.92918 \times 10 \text{ pt.} = 9.2918 \text{ pt.}$ . Noting that `cmsy9.tfm`

exists and assuming that the document source did not specify a fractional scaling of the font, we can hypothesize that unscaled `cmsy9` is the font actually utilized in the document.

```
pkfix-helper: Processing Fj ... done (cmmib10 @ 1.2X, mismatch=0.00073)
--ps file:   Fj:   =
--tex file:   Fj:    $\eta$ 
```

Figure 1: Sample observations of `pkfix-helper` output and output files
