ConTEXt

title   : ConTEXt User Module
subtitle : For French documents
author   : Peter Münster
date   : May 4, 2008

This module tries to do similar things as the frenchb.ldf in LaTeX:

- automatic space before » and after «, :, ?, ; and !

- changing symbol for itemize environment

```
2   \startlanguagespecifics[fr]
       \setcharacterspacing[frenchpunctuation]
       \setupitemize[symbol=2]
       \lccode`\'=`\'
    \stoplanguagespecifics
```

```
3   \appendtoks
       \setcharacterspacing[reset]%
       \setupitemize[symbol=\currentitemlevel]%
       \to \everyresetlanguagespecifics
```

```
4   \mainlanguage[fr]
```

```
5   \doifnotmode{demo}{\endinput}
```

Usage example:

```
6   \def\myItems{%
       \startitemize
       \item test
       \item test
          \startitemize
          \item test
          \item test
             \startitemize
             \item test
             \item test
             \stopitemize
          \stopitemize
       \stopitemize}
```

```
7   \usemodule[french]
```

```
8   \starttext
    Voilà: Voilà? Voilà! Voilà;
    {\en some english text: «English» or \quotation{French}, ok?}
    «voilà» \quote{voilà} \quotation{voilà}
    \myItems
    \en
    \myItems
    \stoptext
```
